

METHOD AND SYSTEM FOR PROXY APPROVAL OF SECURITY CHANGES FOR A FILE SECURITY SYSTEM

5

ABSTRACT OF THE DISCLOSURE

A system and method for providing a file security system with an approval process to implement security changes are disclosed. The approval process can be substantially automated as well as configurable and/or flexible. The approval process can make use of a set of approvers that can approve or deny a security change. Different security changes can require the approval of different approvers. The approvers can also be arranged into groups of approvers, and such groups can make use of a hierarchical arrangement.
